- ◆ Module wise/Chapter wise tests
- ◆ Unlimited number of full length/Module wise mock up tests
- ◆ Post training support on subject and exams
- ◆ Membership and Exam scheduling assistance
- ◆ Scheduling to attend the missed classes

PROJECT MANAGEMENT

PMP®

Project Management Professional (PMP)® certification is the most distinguished professional qualification for project managers offered by Project Management Institute (PMI)®. The certification is relevant for professionals who are seeking to advance their career by completing the PMP® certification. A Guide to the Project Management Body of Knowledge,(PMBOK® Guide)—Sixth Edition,Project Management Institute,Inc.,2017

CAPM®

Certified Associate in Project Management (CAPM) ® certification is a world-renowned, education and professional experience program for project practitioners offered by the Project Management Institute (PMI) ®. The CAPM® certification is valid across industries and is recognized worldwide. This certification will validate your fundamental knowledge of project management and its processes. This exam-based certification is useful to achieving high business performance and propels you to the next level of growth.

PMI - ACP®

The PMI-ACP certification recognizes an individual's expertise in using agile practices in their projects, while demonstrating their increased professional versatility through agile tools and techniques. In addition, the PMI-ACP certification carries a higher level of professional credibility as it requires a combination of agile training, experience working on agile projects, and examination on agile principles, practices, tools, and techniques. This global certification also supports individuals in meeting the needs of organizations that rely on project practitioners to apply a diversity of methods to their project management.

PRINCE2® FOUNDATION

PRINCE2® (Projects IN Controlled Environments) is a project management methodology offering a customizable and scalable process for effectively handling diverse range of projects. This method is an established criterion for project management in the UK and is practiced worldwide.

There are two levels of PRINCE2® qualification. The Foundation Level is the first qualification required to become a PRINCE2® Practitioner. This level aims to measure whether a candidate has understood the principles and terminology of PRINCE2 and can act as an informed member of a project management team using PRINCE2® and within an environment supporting PRINCE2®.

PRINCE2® PRACTITIONER

Projects IN Controlled Environments, version 2 or PRINCE2® is a project management methodology that is fast gaining acceptance across the world for its process-driven techniques. These techniques that describe how activities should be coordinated with resources and the various inputs and outputs to be used for maximum project output, can be applied to phases of a project right from its inception to completion.

A certification in PRINCE2® Practitioner reflects a professional's ability to apply and tailor these concepts as per the demands of the system. Edhut comprehensive course covers all objectives of the examination and helps you achieve this certification while also giving you practical skills to shine at the workplace.

PgMP®

The PMI-PgMP certification recognizes advanced experience, skill and performance in the oversight of multiple, related projects and their resources aligned with an organizational objective. PgMP certification holders oversee the success of a program — a way to group multiple, related projects to achieve benefits that may not be realized if the projects were managed in a stand-alone fashion.

As project managers advance in their careers, the experience they gain in managing multiple, related projects and making decisions that advance strategic and business objectives demonstrates this competence.

RISK MANAGEMENT

PMI - RMP®

PMI - RMP Certification acknowledges any project which is subject to risks at every stage, and these risks can have severe consequences on the execution and smooth progress of a project. It is of critical importance that project planning should include identification of potential risks, measures to mitigate threats as well as appropriate responses that curtail the harmful effects of such risks. Project Risk Manager is a role that has been created to fill the real need for a professional who can assess, analyse and curb risks while still maintaining a basic level of competence in project management.

IT SERVICE AND ARCHITECTURE

ITIL® - FOUNDATION

ITIL® is a set of best practices for IT service management (ITSM) that aims in aligning IT services with the needs of business. The IT industry is constantly looking for individuals who are adequately trained in the field of ITIL. This course has lately become the widely accepted standard for IT service management, globally. The best ITIL training from the best training institute enables the participant with the best set of cohesive IT service management practices.

ITIL® - INTERMEDIATE

- ◆ Service Strategy
- ◆ Service Transition
- ◆ Service Operation
- ◆ Operational Support And Analysis (osa)"
- ◆ Service Design
- ◆ Managing Across The Life Cycle
- ◆ Continual Service Improvement
- ◆ Planning Protection & Optimization(ppo)

ITIL® - PRACTITIONER

The ITIL® Foundation Certification introduced us to the basics of the ITIL® framework, and the Intermediate levels provided a deeper focus on IT Service Management. The next step in the ITIL® suite of ongoing excellence is the ITIL® Practitioner certification that helps professionals to understand how to adopt and adapt this ITSM system to support business objectives. By covering the three key areas crucial for success of improvement initiatives, namely Organizational Change Management, Communication and Measurement and Metrics, ITIL® Practitioner offers a comprehensive method to carry out Continual Service Improvement (CSI) to deliver value and maintain global quality benchmarks.

TOGAF 9.1 training from EdHut is designed as per The Open Group norms to ensure that you have an in-depth understanding of the Framework as well as help you clear the exam in the first attempt. Our training will help you understand how to apply ADM and architecture governance in Enterprise Architecture Development.

TOGAF 9.1

Level 1 & 2

TOGAF is an industry recognized enterprise architecture framework used widely across the world. TOGAF 9.1 certification at Edhut assists students in acquiring both Level 1 and Level 2 certifications in one go. This TOGAF training is aimed at participants who require basic to advanced knowledge of Architecture Development Method (ADM), Architecture Repository and Enterprise Continuum.

QUALITY MANAGEMENT

LEAN SIX SIGMA GREEN BELT CERTIFICATION

Lean Six Sigma Green Belts are paraprofessionals who have been trained on the Lean Six Sigma improvement methodology, and who lead or support improvement initiatives within the organization. They work on a data-driven approach to eliminate defects and improve processes in the organization. The Lean Six Sigma Green Belt Certificate Program focuses on creating a mindset and culture shift that eliminates wastage of time and resources, and replaces the methods used in traditional contexts with a set of tools that produce near-perfect results.

6σ

LEAN SIX SIGMA BLACK BELT CERTIFICATION

Lean Six Sigma Black Belts are highly trained professionals in Quality improvement methodology, who are able to apply Six Sigma principles to business processes and lead a quality improvement initiative. They are well versed in the Six Sigma Methodology and can skilfully lead and assume full responsibility for large scale quality improvement projects. They are competent in the use of six Sigma tools and techniques and standard principles. A Six Sigma Black Belt has a thorough grounding in all aspects of the phases of D-M-A-I-C (Define, Measure, Analyze, Improve, Control), and can identify non-value-added elements and activities.

SOFTWARE TOOLS TRAINING

JIRA

JIRA is the most popular Agile project management tool used by software professionals to manage Agile projects efficiently. JIRA is also used for bug tracking and issue tracking during software development. JIRA helps in planning, tracking the team's work, managing releases and reporting the team performance. 1000+ add-ons of JIRA can help one to get the most out of JIRA software. JIRA can be integrated with the existing tools and the workflow can be upgraded with other developer tools. The capabilities of JIRA can be leveraged in the space of Knowledge Management, Real time collaboration, continuous integration etc. Be it Scrum or Kanban or hybrid Agile methodologies, JIRA is an efficient tool for planning

MS - PROJECT

Microsoft Project is a project management software program, developed and sold by Microsoft, which is designed to assist a project manager in developing a plan, assigning resources to tasks, tracking progress, managing the budget, and analyzing workloads. This course provides knowledge and skills on using Microsoft Project. It covers techniques for fine tuning your schedules for time, cost and resources. You will learn how to customize Project for your environment using templates, configuring your own objects and spreading knowledge across your organization. This course is highly beneficial to: Team members, Team Leaders, project lead, project manager and others.

PRIMAVERA P6 - V 8.3

Software Training Primavera P6 (V.8.3) Enterprise Project Portfolio Management is an integrated project portfolio management (PPM) solution comprising role-specific functionality to satisfy each team member's needs, responsibilities, & skill. It provides a single solution for managing projects of any size, adapts to various levels of complexities within a project, & intelligently scales to meet the needs of various roles, functions, or skill levels in your organization. This system can be used to manage projects with up to 100,000 activities. Our three days(24 Hours) training helps end-users how to manage a project from conception to completion using P6, Oracle Primavera's latest web-based project Management application. Learn to efficiently create, schedule, track and monitor project performance and execution.

AGILE METHODOLOGY

Certified Scrum Master (CSM)

Scrum is an agile methodology that can be applied to nearly any project. Commonly used in software development, its iterative approach and flexibility makes the Scrum process ideal for projects with rapidly changing and high emergent requirements, enabling teams to deliver usable software consistently and periodically through a project lifecycle. The role of the ScrumMaster is pivotal and involves removing impediments, facilitating the process, and ensuring the product backlog is in good shape and ready for the next sprint.

Certified Scrum Product Owner®(CSPO)

The Certified Scrum Product Owner® Certification from Scrum Alliance is a validation of your commitment to ongoing excellence in your Agile journey and makes you eligible to take on Product Owner responsibilities and lead successful projects. The Product Owner is the key member of the Scrum Team and shoulders the responsibility of leading the project strategically, collaborating with customers and team on a daily basis, and managing the business value. EdHut's course prepares you for this comprehensive certification through in-depth lectures, extensive quiz sessions and practical lessons that will help you face on the job challenges.

Leading SAFe®4.6

While Agile methods have been found to be readily applicable to small teams, most organizations today work across collaborative teams, complex systems and geographies. In such a scenario, agile implementations often fail to have the expected impact. The Scaled Agile Framework® (SAFe®) is a complete methodology for large-scale Agile project teams to carry out an Agile transformation seamlessly. Applying Lean/Agile principles and practices across all levels within an enterprise is the first step toward such a change. The SAFe® framework effortlessly synchronizes the alignment, collaboration, and delivery of multiple agile teams leading the way to enterprise success.
